React Dev Tools

- Browser Extension
- Great for debugging React issues in browser
- Continue to debug HTML/CSS as normal

Installing

- Go to Chrome Extension "store"
    - Firefox as a version as well
- Install extension

Using React Dev Tools

- Two tabs in browser dev tools
    - Components
        - Lets you inspect React components
            - See passed props
            - Read and update state
        - Use to validate your expectations
        - "Find the line not working as expected"
    - Profiler
        - Lets you record a set of interactions
            - See where your render *time* is spent
